 - a. Overview of Flexiloan
 - b. Business model and Revenue streams
 - c. Technology Architecture & Core Platform Engines
10. FinTech-NBFC Convergence as a Structural Investment Opportunity

1. Overview of Non-Banking Financial Companies (NBFCs)

Non-Banking Financial Companies (NBFCs) are financial institutions registered under the Companies Act, 1956/2013, providing loans, advances, investments, and other financial services. Unlike banks, NBFCs cannot accept demand deposits or participate in the payment system. An NBFC's financial activity must constitute over 50% of its assets and income, a criterion known as the "50-50 test." They are required to register with the Reserve Bank of India (RBI) if meeting this threshold, and certain NBFCs may also need to obtain registration or approvals from other regulatory bodies depending on their activities—for example, housing finance companies (HFCs) with the National Housing Bank (NHB), microfinance institutions (MFIs) with the RBI's MFI regulations, or insurance-linked NBFCs with the Insurance Regulatory and Development Authority of India (IRDAI). NBFCs are classified based on activities, regulatory layers, and liability types, including ICCs, HFCs, MFIs, and P2P lending platforms. Certain NBFCs, like CICs or Account Aggregators, have specialized functions and regulatory frameworks. Public deposit acceptance is tightly regulated, and only select NBFCs with proper licensing and ratings can accept deposits. RBI supervises, inspects, and can penalize NBFCs for regulatory violations. The overarching objective is to protect depositors and maintain financial stability. NBFCs have played a crucial role in extending credit and financial services to underserved sectors of the economy.

2. Fintech: Definition, Technologies and Applications

Fintech (financial technology) refers to the use of advanced digital technologies by companies and financial institutions to deliver, improve, and automate core financial services such as payments, lending, investing, insurance, and money management. It leverages innovations like artificial intelligence, blockchain, cloud computing, the Internet of Things (IoT), and automation to enhance efficiency, reduce costs, and provide faster, more accessible, and customer-centric solutions. Fintech operates across business models including business-to-consumer (B2C), business-to-business (B2B), and peer-to-peer (P2P), covering areas such as digital payments, neobanks, personal finance management, wealth-tech platforms, and online lending. Overall, fintech is transforming the traditional financial ecosystem by increasing financial inclusion, improving user experience, and enabling data-driven decision-making. FinTech offerings in India:

- UPI & Bharat Bill Payment System
- Digital lending
- Payment Aggregators and Payment Gateways
- Prepaid Instruments
- Neo-banking or digital banking services
- Virtual Digital Assets

3. Evolution of NBFCs and Fintech Integration

New-age NBFCs are increasingly leveraging technology and digital ecosystems across the entire lending value chain, including lead generation, customer onboarding, underwriting, loan disbursement, and collections. Tools such as artificial intelligence (AI), machine learning (ML), big data analytics and robotic process automation (RPA) enable alternative credit scoring, real-time decision-making and streamlined operational workflows, improving productivity, cost-efficiency, and turnaround time. Mobile and smartphone penetration has further facilitated financial inclusion by allowing low-income customers to access lending services digitally through e-KYC, e-signatures and mobile-based engagement. Additionally, advanced technologies like distributed ledger systems and application programming interfaces (APIs) are creating connected, interoperable ecosystems among institutions, enhancing credit quality, risk management and customer experience. By integrating fintech solutions, NBFCs have evolved from manual, human judgment-dependent processes to data-driven, automated models that offer instant approvals, continuous risk evaluation, and efficient collections, positioning them as agile alternatives to traditional banking models.

4. Key Regulations and Guidelines for NBFCs and FinTech in India

- Reserve Bank of India Act, 1934
- Reserve Bank of India (Digital Lending) Directions, 2025
- Reserve Bank of India (Non-Banking Financial Companies - Registration, Exemptions and Framework for Scale Based Regulation) Directions, 2025
- Reserve Bank of India (Non-Banking Financial Companies - Credit Facilities) Directions, 2025
- Reserve Bank of India (Non-Banking Financial Companies - Acceptance of Public Deposits) Directions, 2025
- Non-Banking Financial Company - Scale Based Regulation (SBR) Directions, 2023
- Reserve Bank of India (Non-Banking Financial Companies - Miscellaneous) Directions, 2025
- Master Direction - Outsourcing of Financial Services
- Master Directions - Non-Banking Financial Company - Peer-to-Peer Lending Platform (Reserve Bank) Directions, 2017
- Master Direction - Non-Banking Financial Companies Auditor's Report (Reserve Bank) Directions, 2016
- Reserve Bank - Integrated Ombudsman Scheme, 2021
- Framework for Self-Regulatory Organisation in the FinTech sector - RBI
- Framework for Responsible and Ethical Enablement of Artificial Intelligence ("FREE-AI") in the financial sector

5. Drivers of Growing FinTech-NBFC Collaboration:

When structured effectively, NBFC-FinTech collaborations create a synergy of **speed, scale, innovation and compliance**, enabling traditional lenders to compete with emerging digital-first competitors while maintaining regulatory standards.

- **Growing technology adoption in India:** Widespread smartphone penetration, affordable internet, and digital payments infrastructure accelerate FinTech integration with NBFCs.
- **Shift in consumer behavior towards digitalization:** Increasing preference for mobile and online financial services drives NBFCs to adopt technology-enabled solutions.
- **Rapid growth of digital lending and embedded finance:** FinTech platforms provide seamless digital interfaces that complement NBFC lending operations.
- **Demand for faster credit disbursements and superior customer experience:** Customers increasingly expect instant approvals, digital KYC, and end-to-end mobile lending journeys.
- **RBI's focus on regulated lending models:** Collaborative frameworks ensure compliance while leveraging FinTech innovation.
- **Competitive Pressure from Digital Banks and Tech Giants:** Emerging neo-banks, big tech platforms (Amazon, Google Pay, Paytm) entering lending push NBFCs to collaborate with FinTechs to remain competitive and relevant.
- **Need for compliance-backed lending platforms:** NBFCs benefit from FinTech tools to adhere to regulatory and reporting requirements efficiently.
- **Risk Mitigation Needs** - NBFCs face NPAs and credit risk challenges; FinTech tools for AI-powered risk assessment, fraud detection, and collections indirectly encourage partnerships for safer lending.
- **Expansion into new customer segments and geographies:** FinTech partnerships help NBFCs reach underserved populations and semi-urban or rural markets.
- **Lower cost of customer acquisition through technology:** Digital channels, alternative data, and automated onboarding reduce marketing and operational expenses.
- **Data-driven credit assessment and alternative scoring models:** FinTechs enable NBFCs to assess creditworthiness using AI, ML, and big data beyond traditional credit scores.
- **Enhanced operational efficiency through automation:** RPA, workflow digitization and cloud-based platforms streamline lending processes and reduce turnaround time.
- **Innovation in product offerings and revenue streams:** Joint models allow co-designed products like instant loans, buy-now-pay-later, or niche microfinance solutions.
- **Building trust and transparency:** Digital platforms facilitate standardized disclosures, monitoring, and grievance mechanisms, improving borrower confidence.

6. Risks and Challenges in FinTech-NBFC Collaboration Compared to Traditional Banking

- **Regulatory & Compliance Risk:**
 - a. NBFCs remain accountable for KYC/AML gaps, non-compliant onboarding, and misleading disclosures.
 - b. Outsourcing processes to fintechs does not reduce liability under RBI regulations.
 - c. Regulatory ambiguity or delayed adaptation can lead to fines, forced modifications, or suspension of services.
- **Data Governance & Privacy Risk:**
 - a. NBFCs are responsible for customer data handling across fintech partner systems.
 - b. The Digital Personal Data Protection Act, 2023 (DPDPA) mandates strict accountability for collection, storage, and sharing of data.
 - c. Digital platforms increase vulnerability to cyberattacks and breaches.
 - d. Strong cybersecurity and monitoring frameworks are required to mitigate these risks.
 - e. NBFCs must have clearly defined protocols for identifying, reporting, and remediating data breaches, including notifying customers and regulators as mandated by law.
 - f. Data privacy and security should be treated as a board-level responsibility, with policies, risk management frameworks, and compliance reporting embedded in organizational processes.
- **Reputational Risk:**
 - a. Poor service, non-transparent pricing, or aggressive collection practices can damage trust and trigger complaints or regulatory scrutiny.
 - b. Over-reliance on external FinTech vendors, cloud services, or analytics platforms exposes NBFCs to risks from service outages and vendor governance failures.
- **Credit & Underwriting Risk:**
 - a. Use of alternative data and proprietary models by fintechs may introduce model bias or inconsistent lending standards.
 - b. Credit decisions are often based on machine learning algorithms using alternative data (digital transactions, mobile usage, social behavior). Flawed or biased models can misclassify high-risk borrowers as low-risk.
 - c. Algorithmic models may fail under changing market conditions, causing unexpected defaults or losses.

7. Business Model and Revenue Streams of NBFCs in India:

India has 9,185 NBFCs registered with the Reserve Bank of India as on 31st Dec 2025. Non-Banking Financial Companies (NBFCs) in India operate across diverse segments of the financial ecosystem, catering to individuals, businesses, and underserved sectors. Their business models and revenue streams vary according to the type of financial service they provide-ranging from asset financing, personal and business loans, housing finance, and microfinance, to investment management, infrastructure funding, and technology-enabled platforms like account aggregators and P2P lending. It is as follows:

NBFC Type	Business Model	Revenue Streams
Asset Finance Company (AFC)	Financing physical assets such as automobiles, machinery, and equipment	Interest on loans and hire-purchase agreements, processing fees, late payment charges
Loan Company (LC)	Providing general-purpose loans and credit facilities	Interest income, processing fees, origination fees

NBFC Type	Business Model	Revenue Streams
Investment Company (IC)	Acquiring and managing securities and investment instruments	Dividend income, capital gains, advisory/management fees
Infrastructure Finance Company (IFC)	Long-term financing for infrastructure projects	Interest income, loan servicing fees
Microfinance Institution (NBFC-MFI)	Small-ticket loans for economically weaker sections	Interest on microloans, processing fees
Housing Finance Company (HFC)	Home loans and property financing	Interest on home loans, processing and documentation fees
Core Investment Company (CIC)	Holding investments in group companies	Dividend income, capital appreciation
Infrastructure Debt Fund (IDF-NBFC)	Refinancing infrastructure sector debt	Fund management fees, interest income from refinanced loans
Account Aggregator (AA)	Data sharing and consent management services	Subscription fees, data access fees, API usage charges
Peer-to-Peer Lending Platform (P2P)	Facilitating direct borrower-lender connections	Platform fees, origination fees, late payment charges

8. Digital Transformation Journey of a Traditional NBFC - Bajaj Finance

Overview of Bajaj Finance:

Bajaj Finance Limited (BFL), a subsidiary of Bajaj Finserv Limited, is a leading deposit-taking NBFC in India, registered with the Reserve Bank of India and classified as an NBFC-Investment and Credit Company (NBFC-ICC). Since September 2022, it has been categorized as an upper-layer NBFC under RBI's Scale Based Regulation (SBR). Established in 1987 as Bajaj Auto Finance Private Limited to provide two- and three-wheeler loans, BFL has expanded into diversified lending across retail, SMEs, commercial, and rural sectors, while also offering payments, partnerships, and deposit services. The company has two key subsidiaries- Bajaj Housing Finance Limited (HFC) and Bajaj Financial Securities Limited (stockbroking and depository services). Additionally, BFL holds stakes in technology firms Snapwork Technologies and Pennant Technologies, reflecting its focus on digital integration. Over the years, BFL has evolved into one of India's largest and most technologically advanced NBFCs, leveraging innovation to expand its lending portfolio and enhance customer experience.

Business model and revenue streams:

BFL has established a diversified business model designed to balance risk and profitability while driving sustainable growth. The model focuses on acquiring millions of customers and offering a wide range of financial products and services across ten key categories: Consumer Lending (Sales Finance), Personal Loans, SME Lending, Auto Financing, Rural Lending, Gold Loans, Commercial Lending, Loan against Securities, Deposits and Partnerships and Services. By cross-selling multiple offerings, BFL continuously innovates to enhance customer experience and create profitable growth opportunities. Its revenue streams are primarily derived from interest income, interest and finance charges, fees and commission income, sale of services, and income on de-recognised loans.

Technology and Data analytics Evolution (2021-2025):

2021 - Foundations of Digital Transformation

This phase marked the transition from a traditional NBFC to a **digitally enabled platform with scalable infrastructure**

- Initiated a strategic shift toward an **omnichannel operating model**, aiming to unify physical and digital customer journeys and improve operational scalability.
- Undertook large-scale **enterprise architecture modernisation**, transitioning APIs to a **microservices-based architecture on PaaS** and moving from relational to **NoSQL databases** to handle higher transaction throughput.
- Strengthened **DevOps and TechOps capabilities**, with enhanced KPIs, QA automation, and structured requirement discovery, enabling faster and more reliable software deployment cycles.
- Launched a revamped **customer mobility app**, integrating payments, lending, investment products, and rewards into a single interface.
- Built foundational capabilities in **data analytics and AI**, including data lakes, OCR, NLP, and ML, while enhancing cybersecurity through cloud-based protections.

2022 - Omnichannel Expansion and Payment Solutions

Bajaj Finance evolved into a **platform-led distribution model**, embedding finance across payments and commerce ecosystem

- Expanded the mobility app into a **full-stack financial super app** with 55+ features, including wallets, UPI, bill payments, and embedded financial journeys.
- Migrated **600+ APIs to microservices** and scaled NoSQL infrastructure, improving system resilience and enabling high-volume transaction processing.
- Launched **proprietary digital marketplaces** (EMI Store, Insurance, Investment, Broking), embedding financial products within customer consumption journeys.
- Introduced '**Bajaj Pay**', integrating wallet, merchant payments (POS/QR), and rewards into a unified payments ecosystem.
- Strengthened **Customer Data Platform (CDP)** and digital marketing capabilities to drive targeted acquisition and cross-sell.
- Leveraged **big data, cloud (Azure), and advanced analytics tools (R/Python, ML models)** for lifecycle management-across underwriting, collections, and servicing.

2023 - Data Platforms and Emerging Technologies

The company transitioned from digital enablement to a **data-centric organization with real-time decisioning capabilities**

- Consolidated digital platforms: Bajaj Finserv App, web, and BajajMall marketplaces into a more **integrated platform ecosystem**, supported by dedicated in-house tech teams.
- Migrated enterprise data to a **cloud-based data lake**, complemented by **data streaming capabilities** for real-time ingestion and processing.
- Scaled **data science applications (OCR- Optical Character Recognition, NLP- Natural Language Processing, ML)** to enhance customer experience, automate processes, and improve decision accuracy.
- Integrated multiple business lines into a unified **CDP**, enabling coordinated multi-channel campaigns and communication governance.
- Strengthened infrastructure through a **zero-trust security framework**, high-availability systems, and automated monitoring across thousands of KPIs.
- Integrated with the **Account Aggregator ecosystem**, enabling real-time access to financial data and improving underwriting models and geographic risk expansion.
- Promoted **analytics democratization** via Power BI and internal training, embedding data-driven decision-making across functions.

2024 - Generative AI and Advanced Digital Platforms

This phase marked the shift toward an **AI-augmented operating model with enhanced personalization and efficiency**

- Launched new **digital acquisition platforms** across segments (MFI, auto, tractor finance), while transitioning to a **next-generation core lending system**.

- Expanded internal and partner-facing applications (SalesOne, DMS One, PartnerOne), enabling **lead sharing, cross-selling, and merchant onboarding**.
- Progressed toward a **data lakehouse architecture**, with enterprise streaming and anonymized data frameworks to enhance governance and scalability.
- Deployed **Generative AI use cases**, including chatbots, content generation, and developer copilots, alongside employee upskilling initiatives.
- Strengthened cybersecurity through **advanced frameworks (SOAR- Security Orchestration, Automation & Response, VAPT- Vulnerability Assessment & Penetration Testing, NAC- Network Access Control)** and deeper compliance and consent management systems.
- Embedded **AI and ML models across operations**, enabling personalized offerings, real-time credit decisions, and seamless customer journeys.
- Expanded usage of **Azure, Power BI, and graph databases** for advanced analytics, multi-bureau risk assessment, and monitoring.

2025 - Data Lakehouse, Blockchain, and Enterprise Security

Bajaj Finance emerged as a **fully integrated, AI-native financial services platform** with strong data governance and security infrastructure

- Completed transition of the **entire loan portfolio to a new core lending platform**, improving flexibility and product innovation capabilities.
- Enhanced digital ecosystems (SalesOne, PartnerOne, MerchantOne) with features like **Video KYC, face authentication, and multi-party workflows**, streamlining onboarding and servicing.
- Fully implemented a **data lakehouse architecture**, integrating structured and unstructured data with real-time enterprise streaming and anonymized governance layers.
- Introduced **blockchain-based solutions** in insurance and banking workflows to improve transparency and operational efficiency.
- Strengthened cybersecurity with **advanced monitoring, anomaly detection, zero-trust frameworks and proactive threat management**.
- Established a **centralized AI unit**, deploying 20+ AI use cases across conversational AI, computer vision, and agentic workflows.
- Leveraged **Microsoft Azure, Fabric, and Power BI** for high-frequency KPI tracking, granular risk insights, and enterprise-wide decisioning.

Omnichannel Strategy (2022-2025)

BFL's omnichannel strategy focuses on building an **"omnipresent" financial services platform** across physical, app, web, payments, and partner ecosystems. The model spans seven core domains-**geographic expansion, app, web, payments, productivity apps, CDP, and social**-driving a shift from product-led to customer-first, platform-led engagement.

FY2022 - Foundation & Platform Buildout

- Expanded to **3,504 locations (+516)**, driven by data-led geographic targeting.
- Rebuilt **Bajaj Finserv App** (55 features), achieving ~14M installs and ~8M MAU; enabled seamless lending, investment, and card journeys.
- Scaled payments (**6.4M wallets, 2M UPI handles**) and built early merchant ecosystem.
- Implemented **Customer Data Platform (CDP)** and launched productivity tools (**Sales One, DMS One**) to streamline sales and collections.

FY2023 - Scale & Integration

- Expanded to **3,733 locations**, with deeper penetration in under-served regions.
- App scaled to **35M+ installs**, driving core product acquisition (EMI cards, personal loans, credit cards).
- Payments scaled significantly (**~13M UPI handles, ~16M wallets; 627K merchant QRs**).
- Productivity apps expanded across **45,000+ agents**, improving operational efficiency and compliance.

FY2024 - Deepening Engagement & Ecosystem Expansion

- Expanded to **4,145 locations**; executed "All products in all locations" strategy.
- Strengthened app-web integration (704 features), driving large-scale product distribution (EMI cards, personal loans, flexi-loans, deposits).
- Payments ecosystem scaled further (**26M+ wallets, 2.5M merchant QRs**); launched Bajaj Pay FastTag.

- Expanded productivity suite (Sales One, DMS One, Merchant One, Partner One) with strong adoption across merchants and partners.
- Upgraded CDP for real-time orchestration across channels.

FY2025 - Platform Maturity & Digital Commerce Integration

- Expanded to **4,263 locations**; gold loan branches scaled to 1,200+, strengthening physical-digital integration.
- App reached **70M+ installs (770 features)**, becoming the primary distribution engine across lending and payments.
- Continued strong product origination via digital channels (EMI cards, personal loans, gold loans, flexi-loans).
- Launched **ONDC-based buyer app ("Hamara Mall")**, integrating digital commerce into the ecosystem.

9. Emergence of FinTech-Native Lenders: The Case of FlexiLoans

Overview of Flexiloan:

FlexiLoans is a trade name of Epimoney Private Limited, a Non-Banking Financial Company (NBFC) registered with the RBI. It is a digital lending platform focused on addressing the persistent credit gap faced by SMEs, particularly those underserved by traditional financial institutions due to lack of collateral or formal financial history. With a vision of delivering "financial access at a click," the platform leverages technology and proprietary risk models based on alternative data to enable fast, flexible, and transparent loan disbursements. Its end-to-end digital infrastructure streamlines the entire lending lifecycle—from application and data aggregation to credit scoring, underwriting, disbursement, servicing, and fraud detection—thereby reducing friction and turnaround time. By offering customised financing solutions through a seamless online experience and partnering with lenders, FlexiLoans is positioned to tap into the large unmet demand for SME credit in India while enhancing financial inclusion.

Business model and Revenue streams:

Their business model revolves around "**ecosystem-embedded finance**", partnering with major e-commerce and payment platforms to acquire customers with lower costs and better data for underwriting. Key components:

- **Digital Sourcing & Underwriting:** 100% digital, 48-hour approval process using alternative data (like POS data or e-commerce sales), reducing reliance on traditional credit bureau checks.
- **Asset-Light Co-Lending Model:** FlexiLoans leverages its own NBFC license along with a co-lending model, partnering with banks and larger NBFCs to share risk and provide larger capital pools, with over 70% of AUM growth off-balance sheet.
- **Target Audience:** Underserved traders, retailers, and wholesalers—such as "mom-and-pop" shops—that lack traditional credit history.
- **Product Portfolio:** Offers term loans and supply chain financing.
- **Partnerships:** Partners with platforms like Amazon, Flipkart, Paytm, PhonePe, and Tally to access pre-verified merchant data.
- **Revenue Generation:** Interest income from loans and, potentially, fees from ecosystem partners for facilitating vendor financing solutions.

Technology Architecture & Core Platform Engines(QuickWork):

The team created multiple engines on the platform to perform specific tasks and work flows. Flexiloans currently has around 200 microservices that are contextually grouped under these engines.

- The Digital Lead Generation Engine with an enhanced borrower's experience and a quick integration with existing consumer products.
- An AI-powered Risk Engine with bureau and banking connectors, alternate data connectors, policy orchestrations, scoring engines, and eligibility calculators.
- The customer Onboarding Engine that can enable consumers to digitally sign documents, verify bank accounts, do digital KYC, and get instant money transfers.

- The Co-origination Engine allows easy integration with multiple lenders and manages a healthy capital flow.
- A Loan Servicing Engine that comprises an efficient loan management system, customer service, and BI systems.

10. FinTech-NBFC Convergence as a Structural Investment Opportunity

The evolution of Bajaj Finance Limited and FlexiLoans illustrates a broader structural shift within India's financial ecosystem—where the boundaries between traditional NBFCs and fintech-native players are increasingly converging. While incumbent NBFCs are leveraging technology to enhance scale, reduce costs, and deepen customer engagement through omnichannel and data-driven models, fintech-native lenders are building from the ground up with AI-first architectures, embedded finance models, and asset-light partnerships.

The sector's long-term attractiveness is underpinned by structural tailwinds including **digital adoption, financial inclusion, regulatory support, and the rise of embedded finance**. However, sustainable value creation will depend on a firm's ability to balance **growth with risk management, technology with compliance, and innovation with unit economics**. Consequently, the most compelling investment opportunities lie in businesses that combine **strong data capabilities, scalable platforms, robust risk frameworks, and efficient customer acquisition models**, positioning themselves not merely as lenders, but as **integrated financial ecosystems** in an increasingly digital economy.
